Please be advised that there is a "typo" error on the **Broselow Tape 2007 Edition A**. The error states that the glucagon dosage for children 3-4-5 kg thru white zones should be 0.5mg/kg/dose; for children that fall within the blue through green zones the error states that the dosage should be 1 mg/kg/dose with maximum dose of 1 mg.

Please black out the kg/dose for both of these glucagon dosages on the tape. The dosages for glucagon should read: Glucagon 0.5 mg (3-4-5 kg thru white zones) and 1 mg (blue thru green zones) (max. dose 1 mg).

The Broselow Tape 2007 Edition B does NOT have this error.
