

Chronic Disease in Rutland County

3-4-50 is a simple concept to help us grasp the reality that 3 health behaviors contribute to 4 chronic diseases that claim the lives of more than 50 percent of Vermonters. This data brief compares these measures of all Vermont adults to adults living in Rutland County.

3 BEHAVIORS

Lack of physical activity, poor nutrition and tobacco use are three behaviors that contribute to the development and severity of chronic disease. Four out of five adults in Rutland County do not eat enough fruits and vegetables and two in five do not get the recommended amount of physical activity. One in five Rutland County adults currently smoke. Rutland County adults are statistically similar to all Vermont adults in the three key health behaviors.

LEAD TO 4 CHRONIC DISEASES

Lung disease, diabetes, cancer and cardiovascular disease impact many Vermonters.

- Nearly one in six Rutland County residents have been diagnosed with a lung disease or diabetes/pre-diabetes.
- Almost one in ten adults have been diagnosed with a cardiovascular disease or cancer.

RESULTING IN MORE THAN 50 PERCENT OF DEATHS

- In all, these four diseases account for 58% of Rutland County residents' deaths.

Chronic Disease	Vermont		Rutland County	
	% Adults Diagnosed	% of All Deaths	% Adults Diagnosed	% of All Deaths
Lung Diseases (Asthma/COPD)	15% (11%/6%)	6%	18% (14%/7%)	7%
Diabetes/Pre-Diabetes	13% (8%/6%)	3%	15% (9%/6%)	3%
Cardiovascular Diseases	7%	22%	9%	25%
Cancer	7%	26%	7%	23%

(*) notes statistical difference

Note: Percentages for combined chronic disease prevalence account for Vermonters with dual diagnosis.
