

CTR Form Data Entry Practice

- A client comes to your office on 12/18/07 for an HIV test
- The client says her legal first name begins with H
- She was born in July of 1978 and currently lives in Vermont
- She reports being a Hispanic White female, and her sex at birth was female
- She has been tested for HIV before in October of 2004 and says the result was negative
- As far as risk factors, she reports that she had unprotected vaginal sex with a male who she knows is an IDU within the last year. She has not used injection drugs within the past year
- You talk with the client about ways to decrease the risk associated with her sexual activity
- You do a rapid oral test (anonymous or confidential – you choose)
- The result is Positive/Reactive
- You talk to the client about doing a confirmatory test and she agrees to do it that same day. You do an oral test.
- The client comes back for the test result on 12/24/07 and the result is positive/reactive
- You refer the client to medical care and to PCRS, the client is not pregnant. You later confirm that the client did attend the first appointment of medical care
